This guide provides a detailed operational and functional overview of the Auto Document Issue Register Updater software. The guide explains the purpose of the application, system workflow, user interface, field descriptions, automation logic, and operational procedures.

02. Software Interface

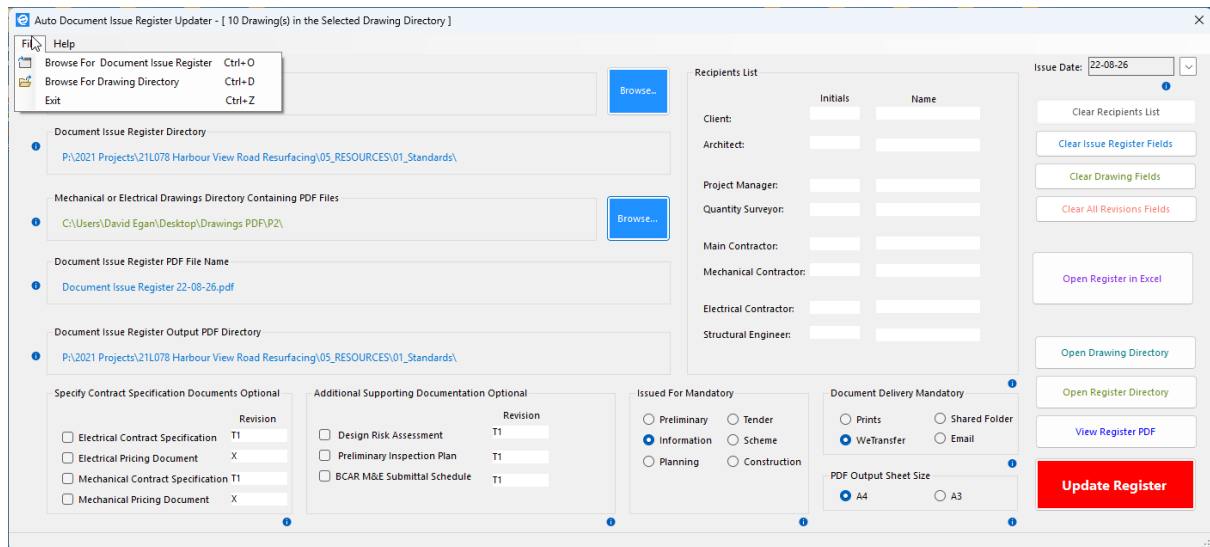

Figure 1 The Auto Document Issue Register Updater Main UI

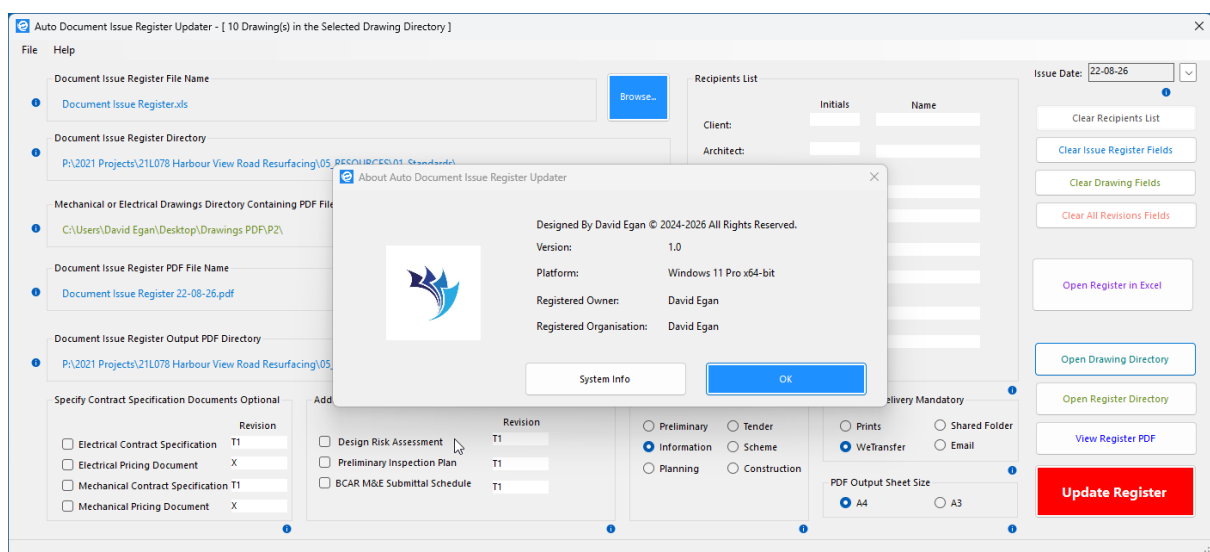

Figure 2 The Auto Document Issue Register Updater and About Dialog

2.1 About Auto Document Issue Register Updater

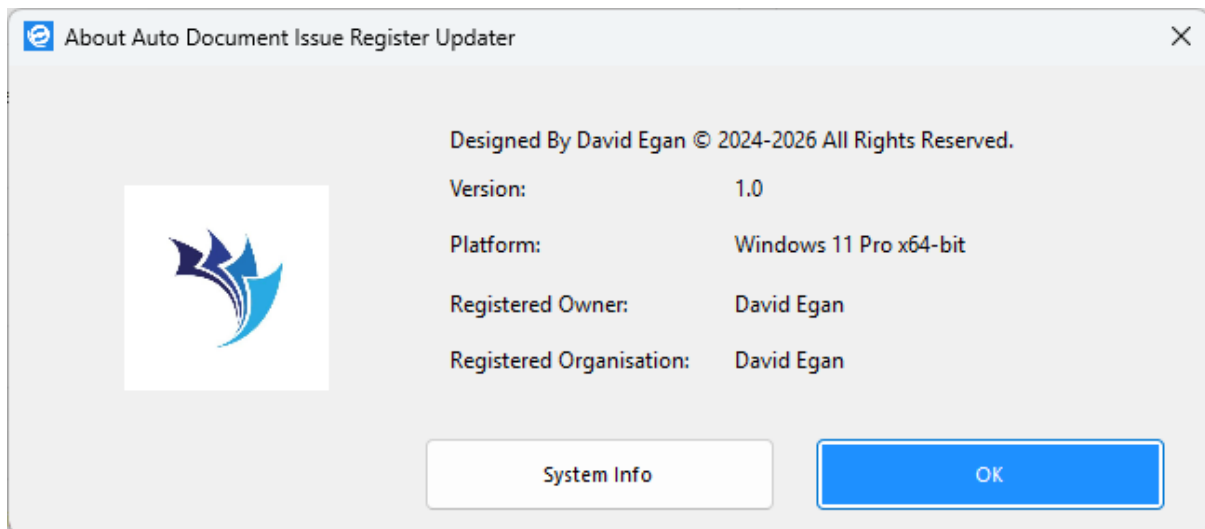

Figure 3 *About Dialog*

Description: Displays application version, platform, operating system registration details and system information.

When to use: Access via Help > About Auto Document Issue Register Updater to verify version number before contacting support or checking for updates.

2.2 Software Design Philosophy

No AI. No fluff. Just engineering.

AutoRegisterUpdater is built like the structures I trust — with reinforced concrete and steel.

What that means:

- **Predictable:** Does exactly what you expect, every time you run it.
- **Dependable:** No hidden calls home. No random updates breaking your workflow.
- **Built to last:** Engineered for real Register work, not demos or trends.

I build software the way it was 20 years ago: solve the actual problem, then get out of your way.

Like a good bridge, it should work on day 1 and day 1001. Same result. No surprises.

That's the standard I hold myself to.
That's AutoRegisterUpdater.

David Egan

Sole Software Developer, System Designer & Solutions Architect

03. System Requirements & Prerequisites

3.1 Operating System: Windows Pro 11 64-bit. This application is a Windows desktop application and is not compatible with macOS, web-only environments, or server installations.

3.2 Microsoft Excel Required: A licensed, installed, and activated desktop version of Microsoft Excel is required on the same computer. Microsoft 365 Apps for Enterprise / Business with desktop Excel is recommended. Excel Online, mobile versions, or viewers alone are not sufficient.

3.3 Excel Must Be Closed Before Updating: To ensure data integrity, the application requires exclusive access to the register file. Please close the Document Issue Register in Excel, Teams, and OneDrive preview before clicking 'Update Register.

3.4 OneDrive / SharePoint / Teams: If your register is stored on OneDrive or SharePoint, ensure the file is not checked out or open for co-authoring by another user. Syncing should be complete. The application works best when the file is synced locally.

3.5 Performance Note: For registers containing a very large number of drawings (e.g. 200+), the update and PDF generation process may take longer than usual depending on the specification of your computer. See Section 07. During this time the application window may appear unresponsive. This is normal - please allow it to complete. See Section 23.6.

04. Software does not support

- Running while the Excel register file is open
- Editing Excel at the same time as an update
- Read-only or password-protected registers
- Encrypted / rights-protected Excel files

05. Quick Start: Update Register in 3 easy steps

1. **Open**
File > Browse For Document Issue Register
→ Select Document Issue Register
2. **Open**
File > Browse For Drawing Directory
→ Select drawing directory
3. **Click Update Register** button

Done. Click **View Register PDF** button or **Open Register in Excel** button

06. Functional Purpose of the Software

- Automates document issue register generation and updating.
- Scans drawing directories for PDF drawing files.
- Updates project distribution registers with revision and issue data.
- Creates standardised PDF issue registers for document distribution.

07. Operating System Requirements

Minimum Requirements

- Operating System: Windows 11 Pro
- Installed RAM: 8 GB
- Display: 1440×900 resolution
- Storage: 50 MB free space
- System type 64-bit operating system, x64-based processor

Reference Test Machine Specification

- Operating System: Windows 11 Pro
- Operating System Version: 25H2
- Processor 13th Gen Intel(R) Core(TM) i9-13900 (2.00 GHz)
- Installed RAM 32.0 GB (31.6 GB usable)
- Graphics card Intel(R) UHD Graphics 770 (128 MB)
- Storage 1TB SSD
- Display 2560 × 1440 resolution
- System type 64-bit operating system, x64-based processor

o8. Installing the Auto Document Issue Register Updater Software

The Auto Document Issue Register Updater software comes with a built-in installer.

1. **Run the installer**
Right-click setup.exe and choose **Run as administrator**.
2. **Choose install location**
Keep the default path C:\Program Files\AutoRegisterUpdater\ and click **Next**.
3. **Set user access**
Select **Install for Everyone**, then click **Install**.
4. **Finish**
When installation completes, the **AutoRegisterUpdater** desktop icon will be created.

AutoRegisterUpdater is now installed. Double-click the desktop icon to launch the application.

o9. Uninstalling the Auto Document Issue Register Updater Software

1. **Launch Control Panel**
Press Win + R, type control, and press Enter.
2. **Open Programs and Features**
Click **Programs > Programs and Features**.
3. **Uninstall AutoRegisterUpdater**
Scroll to **AutoRegisterUpdater**, right-click, and choose **Uninstall**. Click **Yes** to confirm.
4. **Done**
AutoRegisterUpdater is now removed from your computer. The program files and desktop icon are also deleted automatically.

10. Functional Operation Workflow

Step 1 – Select the Document Issue Register

The user selects the Document Issue Register. Only .xlsx or .xls files matching the standard Document Issue Register template are accepted.

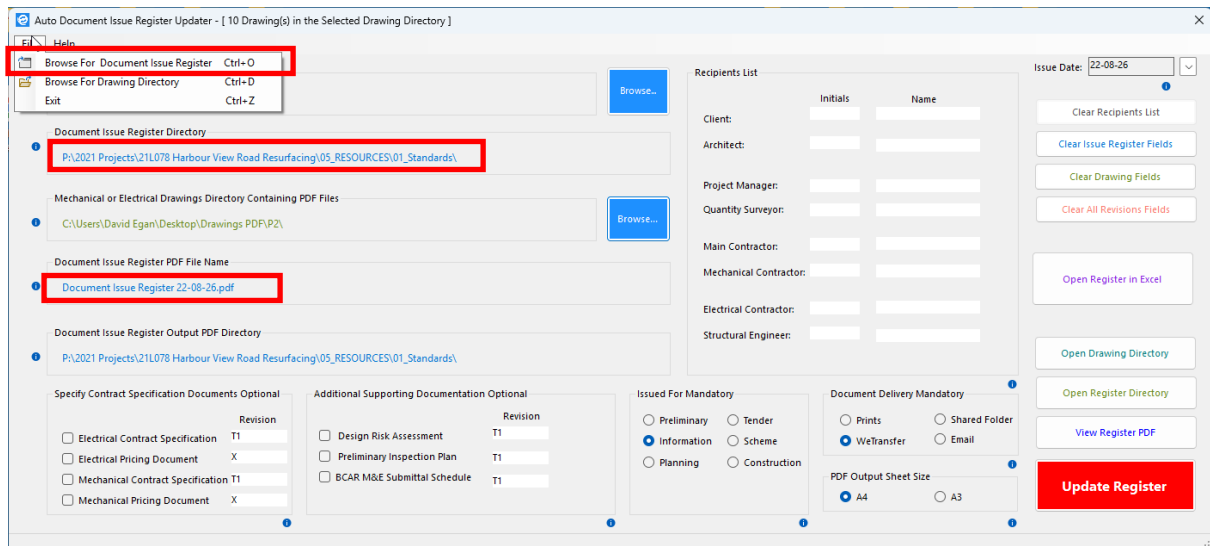

Figure 4 Browse For Document Issue Register

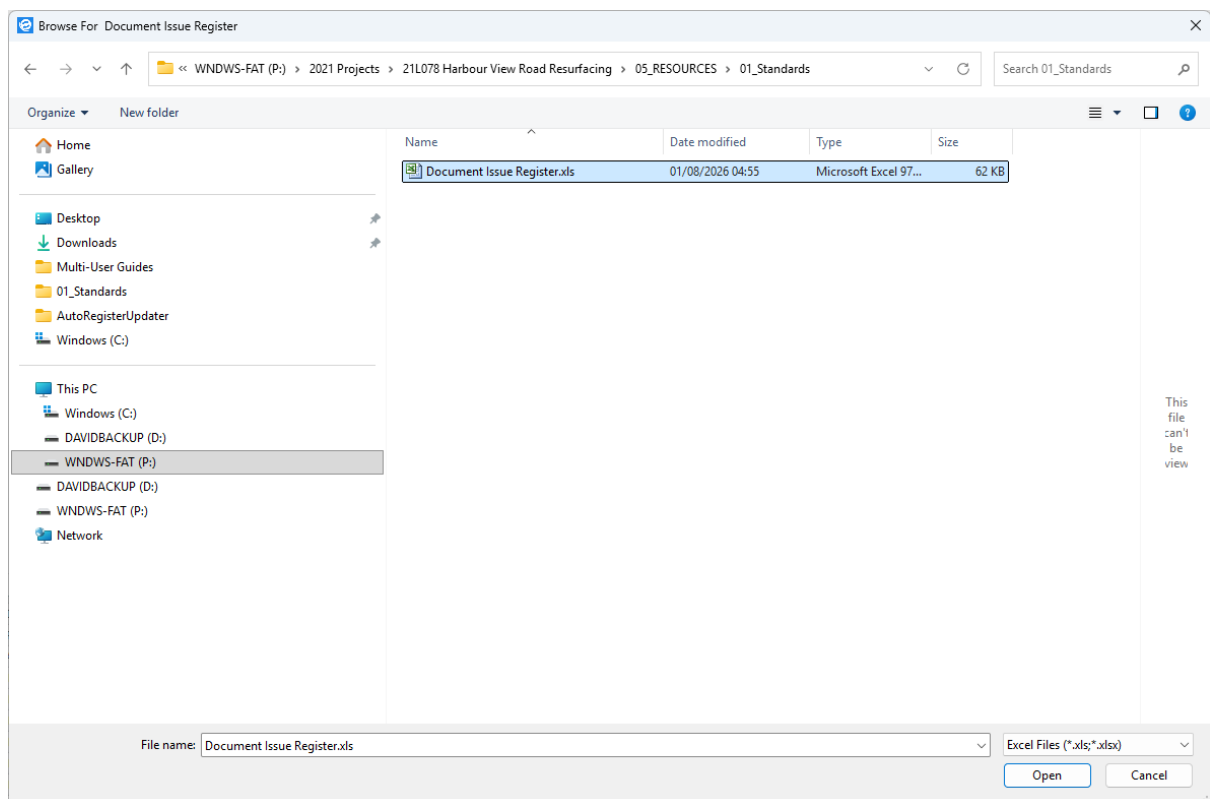

Figure 5 Selecting the Document Issue Register

Step 2 – Select the Drawing Directory

The user selects the directory containing Mechanical or Electrical drawing PDFs. The software scans this directory and identifies all available PDF drawing files for inclusion within the issue register update process.

The validation systems in the software have been deliberately designed to be rigorously aggressive. Doing this forces our drawing filename(s) in their drawing directory to be structured and symmetrical prior to updating the register. This symmetrical, structured and consistent approach is then reflected in the final output the Document Issue Register and PDF register. See Section 23.1

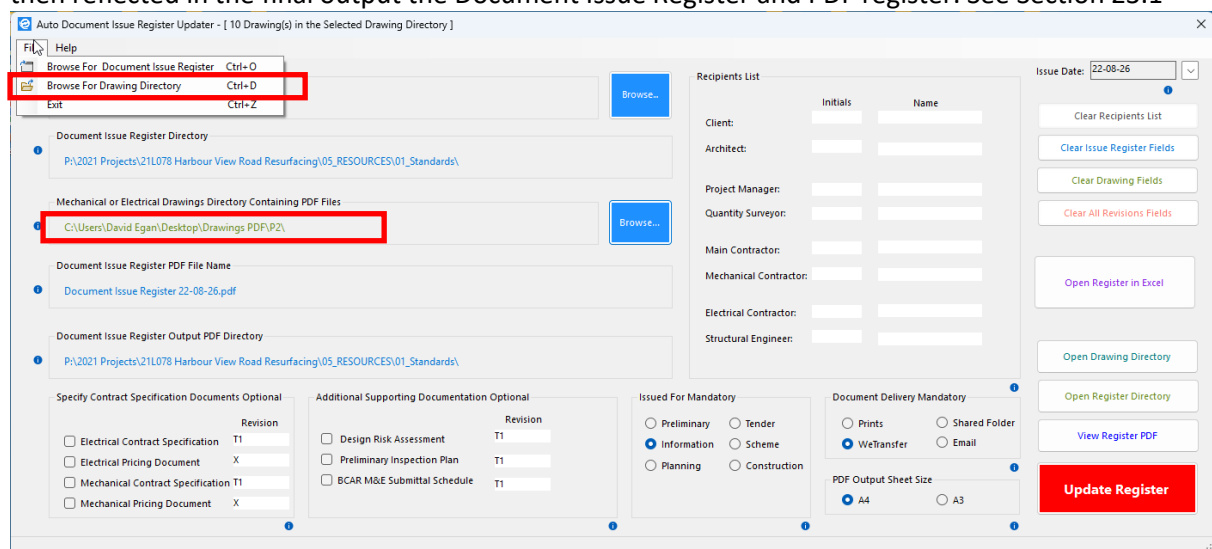

Figure 6 Browse For Drawing Directory

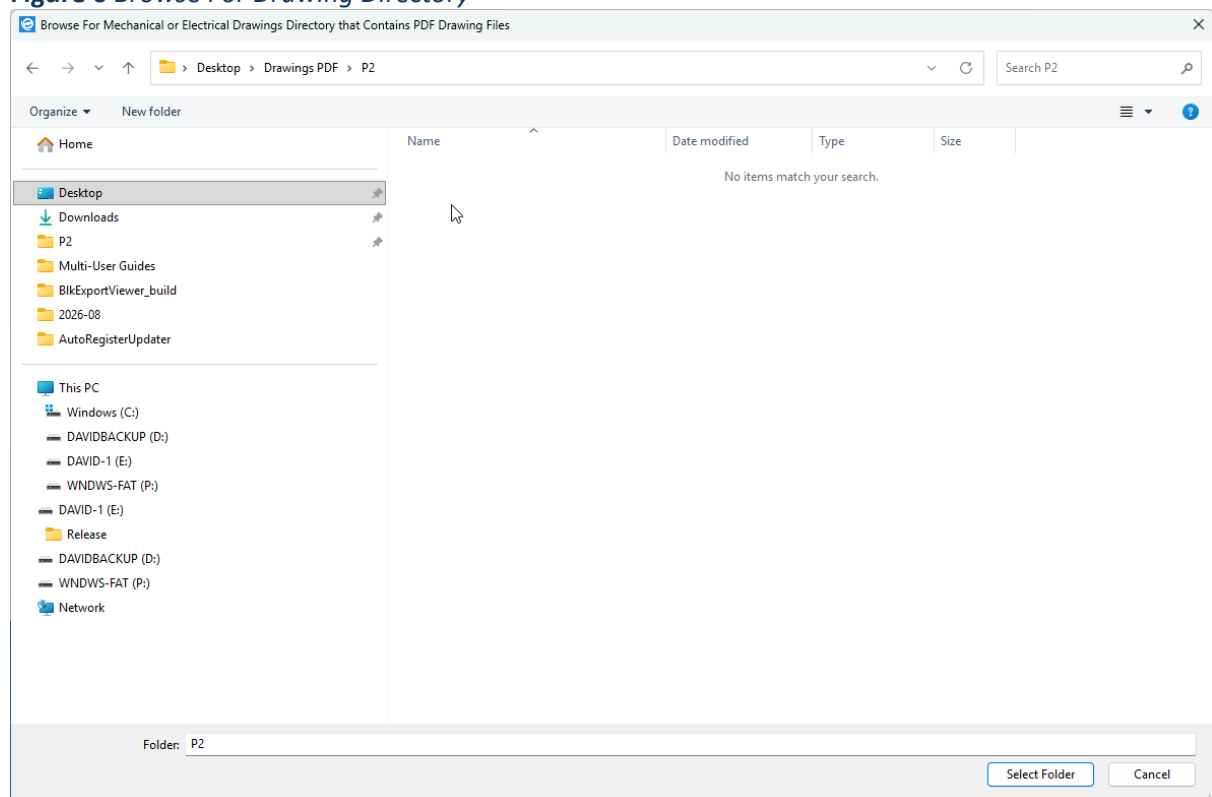

Figure 7 Selecting the PDF Drawing Directory

Step 3 – Read Drawing Information

The application processes the PDF file names and extracts drawing references, revision identifiers, and drawing metadata where applicable.

Step 4 – Configure Issue Information

The user enters issue metadata including:

- Issue date
- Recipient details
- Issue purpose
- Delivery method

The screenshot shows the 'Auto Document Issue Register Updater' application window. The interface includes a menu bar (File, Help), a toolbar with 'Browse For Document Issue Register' (Ctrl+O), 'Browse For Drawing Directory' (Ctrl+D), and 'Exit' (Ctrl+Z). The main area is divided into several sections: 'Document Issue Register Directory' with a file path, 'Mechanical or Electrical Drawings Directory Containing PDF Files' with a file path, 'Document Issue Register PDF File Name' with a file name, and 'Document Issue Register Output PDF Directory' with a file path. There are also sections for 'Specify Contract Specification Documents Optional' and 'Additional Supporting Documentation Optional', each with a table of documents and revisions. The 'Issued For Mandatory' section has radio buttons for 'Primary', 'Tender', 'Information', 'Scheme', 'Planning', and 'Construction'. The 'Document Delivery Mandatory' section has radio buttons for 'Prints', 'WeTransfer', 'Shared Folder', and 'Email'. The 'PDF Output Sheet Size' section has radio buttons for 'A4' and 'A3'. A red 'Update Register' button is at the bottom right. Four callouts point to specific fields: '1. Issue Date' points to the 'Issue Date' field (22-08-26), '2. Recipients' points to the 'Recipients List' section, '3. Issue Purpose' points to the 'Issued For Mandatory' section, and '4. Delivery Method' points to the 'Document Delivery Mandatory' section.

Figure 8 Configuring Issue Metadata

Enter the distribution details for this register update. Some fields are required: Issue Date, Recipient Details, Issue Purpose, and Delivery Method. This information is written to both the Excel register and the generated output PDF register.

Step 5 – Select Optional Supporting Documentation

Optional project documentation can be included within the register update. Each document type can contain its own revision reference.

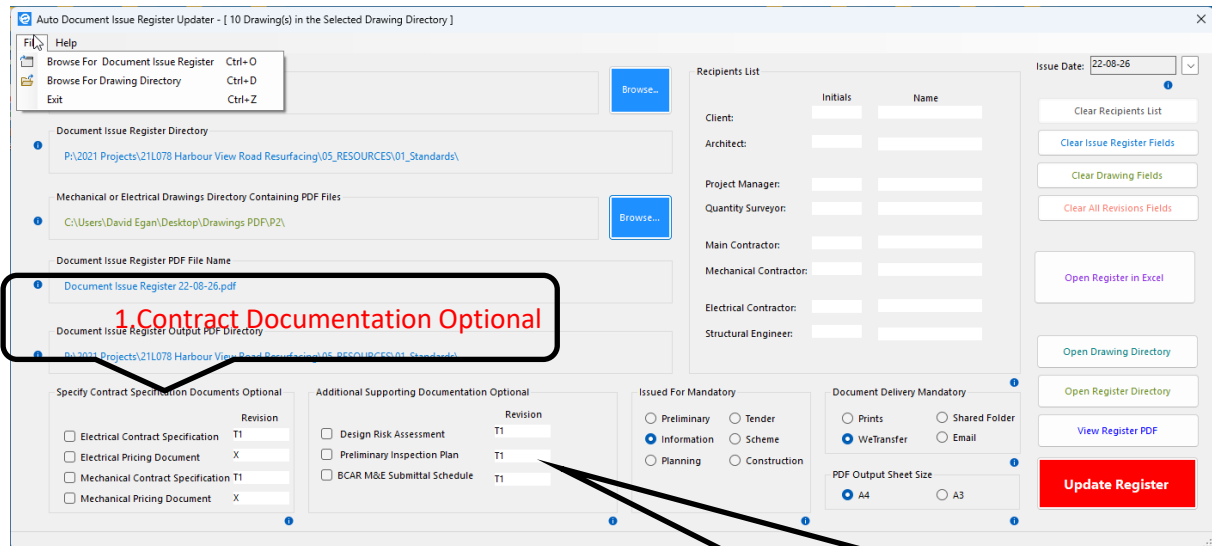

Figure 9 Select optional supporting documentation

2.Supporting Documentation Optional

Step 6 – Interactive Tooltip Help

Hover your mouse over the information icons for interactive Tooltip help.

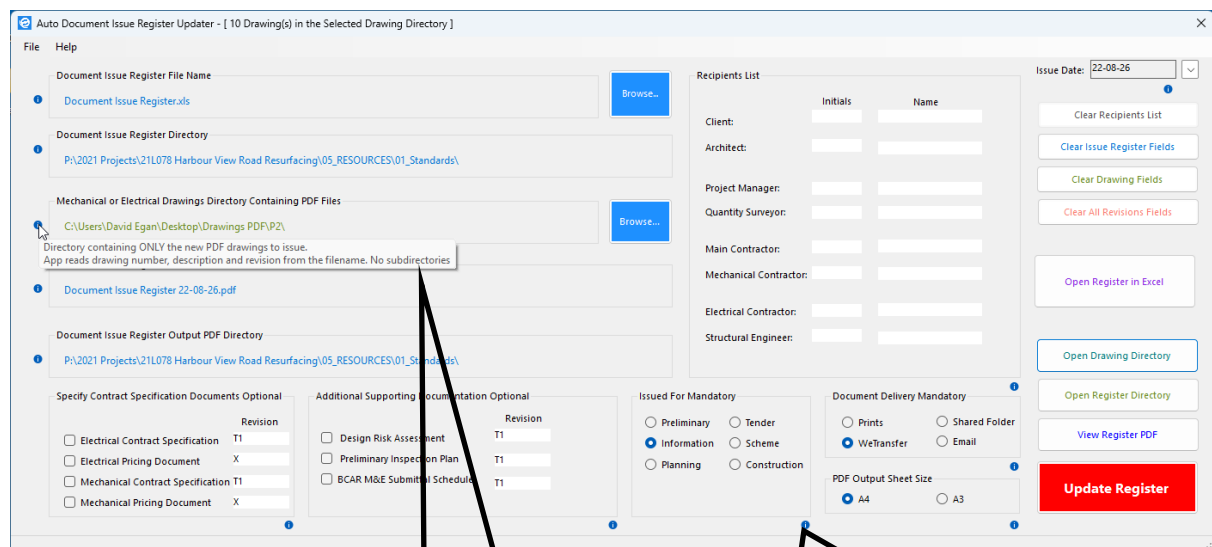

Figure 10 Interactive Tooltip Help

1.Information Icon

2.Interactive Help

Step 7 – Update Register

When the 'Update Register' button is pressed, the software:

- Validates entered information
- Reads the selected drawing directory aggressively validating
- Updates the register data structure
- Generates or updates the PDF register output
- Saves the updated register to the specified output directory

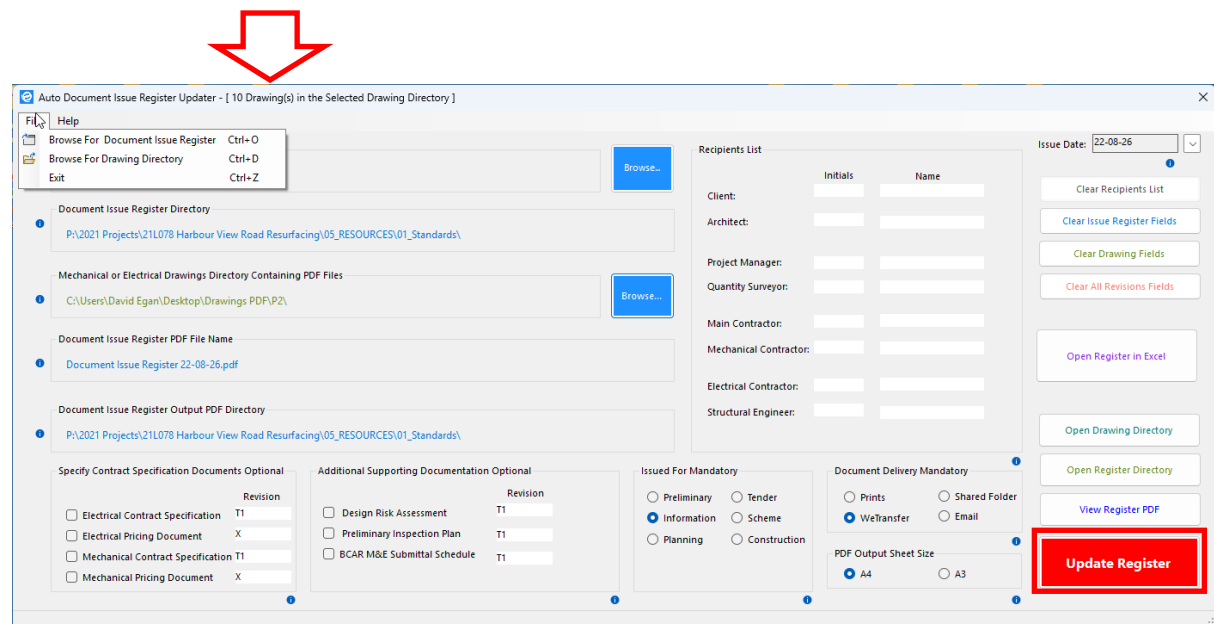

Figure 11 *Running the Register Update Button*

After selecting the register, drawing directory, and entering issue metadata, the application's title bar shows the number of drawings detected. Click Update Register to validate inputs, process PDFs, and generate outputs. A completion dialog is displayed to the user when the document issue register has been updated successfully. Refer to section 22.2 in this guide.

Step 8 – Output and Review

The user can:

- Open the register in Excel
- Open drawing directory
- Open register directory
- View the generated PDF register

for verification and project issue distribution.

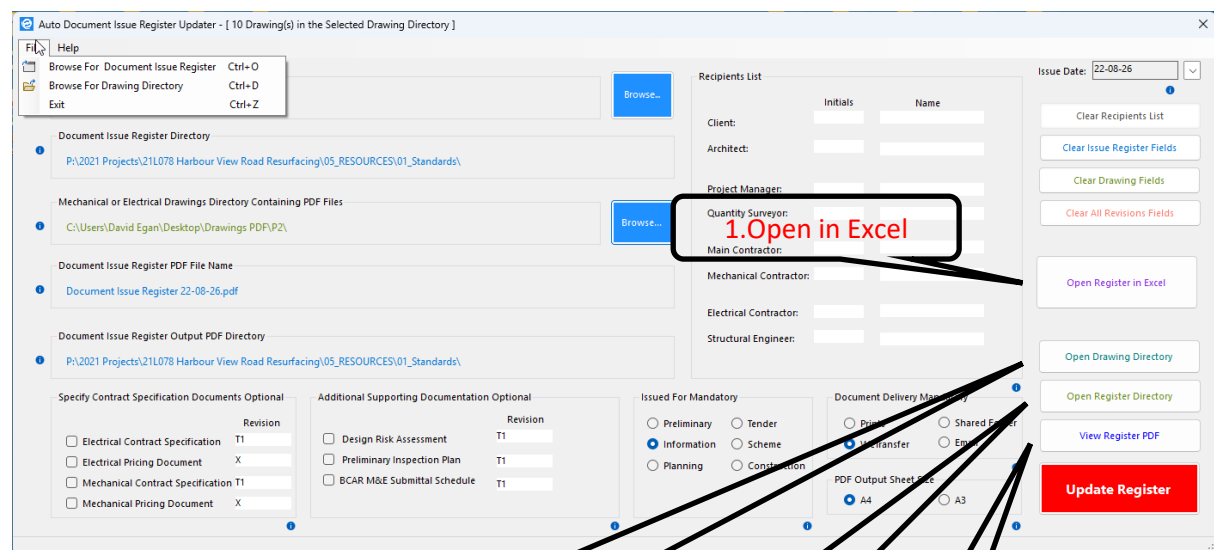

Figure 12 Output and Review

2. Open Drawing Directory

3. Open Register Directory

4. View Register PDF

11. User Interface Description

File Menu

Provides access to core file selection and application exit functions.

Document Issue Register Directory

Displays the selected project register file location.

Drawing Directory Field

Displays the selected directory containing project drawing PDFs.

PDF File Name Field

Displays the automatically generated issue register PDF filename.

Output PDF Directory

Displays the destination directory where generated PDF registers are saved.

Recipients List

Enter recipient initials and names for document issue distribution records.

Optional Documentation Panels

Allows inclusion of supporting specification and compliance documents.

Issue Type Controls

Defines the purpose of the document issue.

Document Delivery Controls

Defines how documents are distributed to recipients.

PDF Sheet Size Controls

Defines the sheet size PDFs are generated at.

Action Buttons

Provides operational commands including clearing fields, opening files, open directories, viewing outputs, and updating the register.

12. Detailed Functional Controls

- Browse For Document Issue Register: Opens a file browser allowing the user to select the primary project issue register.
- Browse For Drawing Directory: Opens a directory browser allowing selection of the drawing PDF directory.
- Clear Recipients List: Removes all entered recipient names and initials.
- Clear Issue Register Fields: Resets issue register related information.
- Clear Drawing Fields: Clears the selected drawing directory information.
- Clear All Revisions Fields: Removes all revision entries from optional documentation fields.
- Open Register in Excel: Launches the associated Excel register file for editing or review.
- Open Drawing Directory: Opens the directory containing the drawing(s) inputs.
- Open Register Directory: Opens the directory containing the register outputs.
- View Register PDF: Launches the generated PDF issue register.
- Update Register: Executes the complete register updating and PDF generation operation.

13. Recipients List Functionality

The Recipients List section enables controlled distribution management. Each project stakeholder can be assigned initials and a descriptive name. This information is used during issue register generation and distribution tracking.

- Client
- Architect
- Project Manager
- Quantity Surveyor
- Main Contractor
- Mechanical Contractor
- Electrical Contractor
- Structural Engineer

14. Revision Management Logic

Revision fields allow the user to define the revision status of each optional document. Typical revision codes include:

- T1 – Tender Revision
- P1 – Preliminary Revision
- C1 – Construction Revision
- X – Revision has not been defined / Revision placeholder / Not applicable

These revision references are incorporated into the generated issue register and PDF register.

15. Issue Type Operation

The Issue Type section determines the operational purpose of the document issue. Only one issue type should normally be selected for each distribution.

- Preliminary
- Information
- Planning
- Tender
- Scheme
- Construction

16. Document Delivery Operation

The delivery selection defines how documents are distributed to project stakeholders.

- Prints
- WeTransfer
- Shared Directory
- Email

17. PDF Output Sheet Size

The output sheet size determines whether the PDF file is in A4 or A3 format.

- A4
- A3

18. Internal Functional Logic

- Reads project drawing PDFs from the selected directory.
- Associates issue metadata with document records.
- Builds an updated issue register structure.
- Applies revision and issue classifications.
- Generates updated PDF register outputs.
- Maintains standardised issue formatting.

19. Recommended Operating Procedure

- Verify all PDF drawing names before processing.
- Ensure revision references are correct.
- Maintain consistent project directory structures.
- Store generated registers within controlled project directories.
- Review generated register PDF outputs before distribution.

20. Troubleshooting

Problem: Register does not update

Solution: Verify the selected register and drawing directory paths.

Problem: PDF output missing

Solution: Ensure the output directory is accessible and writable.

Problem: Excel register does not open

Solution: Verify Microsoft Excel is installed and the register file exists.

Problem: Drawings not detected

Solution: Confirm the selected directory contains PDF files.

21. Conclusion

The Auto Document Issue Register Updater provides a structured and automated method for managing project drawing distributions, revision control, and issue register generation. The software improves consistency, reduces manual administration effort, and supports controlled project documentation workflows.

22. Application Error Messages

22.1 Invalid Document Issue Register File

Figure 13

Message: "The selected file is not a valid document issue register Excel file."

Cause: The selected .xlsx or .xls file does not match the required Document Issue Register template structure.

Resolution:

1. Verify you selected the correct Excel file.
2. Ensure the file contains the standard Document Issue Register sheets and column headers.
3. Do not select PDFs, Word docs, or other file types.

22.2 Successful Update Confirmation

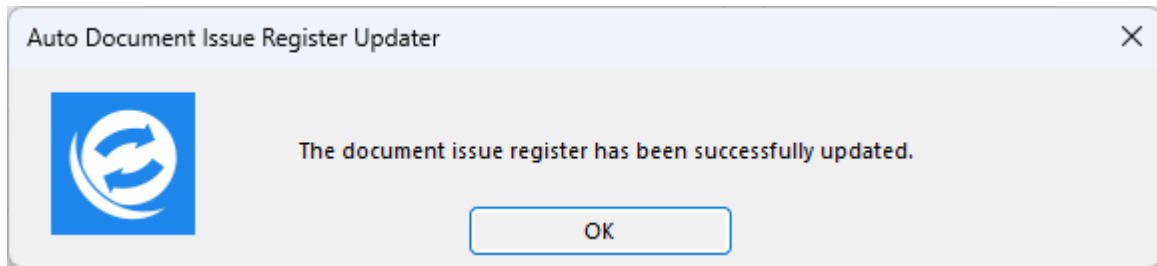

Figure 14

Message: "The document issue register has been successfully updated."

Cause: All drawing revisions have been processed. Both the Excel register and PDF register have been updated.

Resolution: No action required. You can now open the updated Excel or PDF register to review changes.

22.3 Non-Compliant PDF Drawing Files

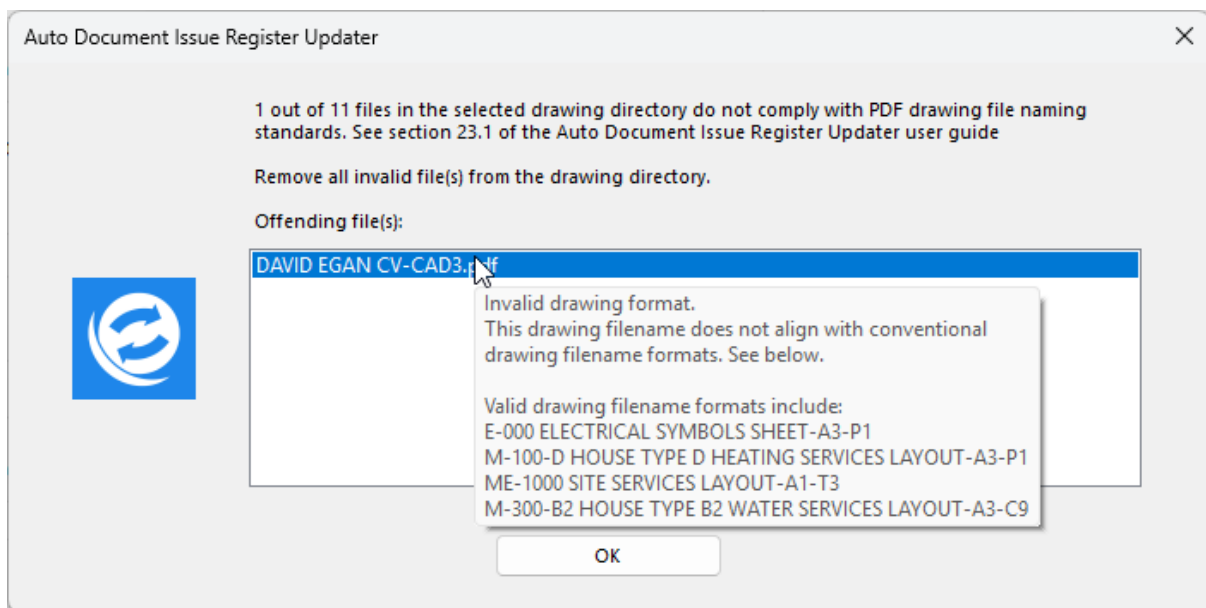

Figure 15

Message: "1 out of 11 file(s) in the selected drawing directory do not comply with PDF drawing file standards."

Cause: The directory contains 1 file that is not valid or files that are not valid PDF drawings, or drawing(s) failing the validation rules. See Section 23.1

Example Offending File: David Egan CV-CAD3.pdf- this is a CV, not a drawing.

****Tip**** Hover your mouse over the offending file(s) to get insights on the reason the file(s) failed the validation rule(s).

Resolution:

1. Remove all non-drawing files from the directory.
2. Rename all PDF drawings to include drawing number and revision. See Section 23.1
3. Ensure only current issue drawings remain in the directory.
4. Click "Update Register" again.

22.4 Multiple Instances Running

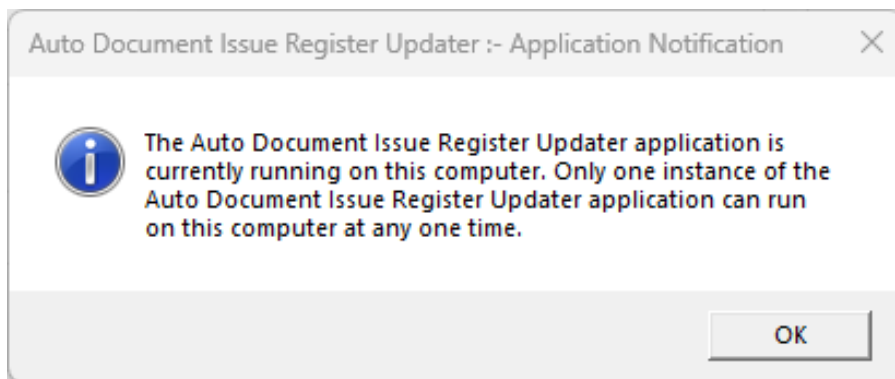

Figure 16

Message: "The auto document issue register updater application is currently running on this computer. Only one instance can run at any one time."

Cause: You launched the application while another instance is already open.

Resolution:

1. Check your Windows taskbar for the existing application window.
2. If not visible, open Task Manager (Ctrl+Shift+Esc) and end "AutoRegisterUpdater" task.
3. **Relaunch** the application.

22.5 PDF Register Does Not Exist

Figure 17

Message: "The document issue register PDF file does not exist yet. Click the Update Register Button to create it, and try viewing it again."

Cause: You attempted to open/view the PDF register before it has been generated.

Resolution:

1. Ensure you have selected both the Excel register and drawing directory.
2. Click "Update Register" to process the files and generate the PDF.
3. After successful update, the PDF will be available to view.

22.6 Selected Excel File Missing

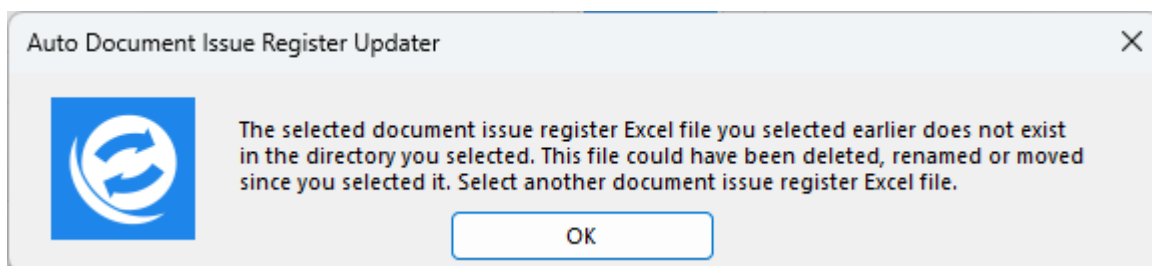

Figure 18

Message: "The selected document issue register Excel file you selected earlier does not exist in the directory you selected. This file could have been deleted, renamed or moved since you selected it."

Cause: The file path stored by the application is no longer valid. The Excel file was moved, renamed, or deleted.

Resolution:

1. From the File menu select Browse For Document Issue Register (Ctrl+O) to browse and select another Document Issue Register or alternatively click the blue browse button adjacent to the document Issue register filename row.
2. Navigate to the current location of the file.
3. Avoid moving or renaming the register file while the application is open.

22.7 Excel File Directory Does Not Exist

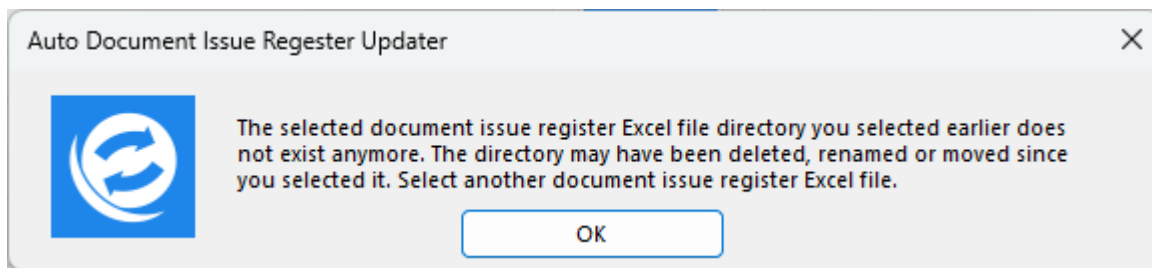

Figure 19

Message: "The selected document issue register Excel file directory you selected earlier does not exist anymore. The directory may have been deleted, renamed or moved since you selected it."

Cause: The directory path stored by the application is no longer valid. The Excel file directory was moved, renamed, or deleted.

Resolution:

1. From the File menu select Browse For Document Issue Register (Ctrl+O) to browse and select another Document Issue Register or alternatively click the blue browse button adjacent to the document Issue register filename row.
2. Navigate to the current location of the file.
3. Avoid moving or renaming the register directory while the application is open.

22.8 Select Document Issue Register Prompt

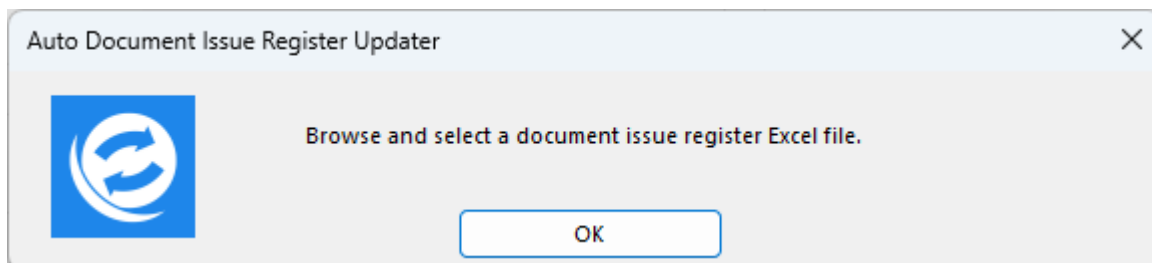

Figure 20

Message: "Browse and select a document issue register Excel file."

Cause: Standard prompt displayed when no Excel register has been selected yet.

Resolution:

1. From the File menu select Browse For Document Issue Register (Ctrl+O) to browse and select Document Issue Register or alternatively click the blue browse button adjacent to the document Issue register filename row.

2. Document Issue Register can either be a .xlsx or .xls file. This is typically named something like "ProjectName_Document_Issue_Register.xlsx" or "ProjectName_Document_Issue_Register.xls".

22.9 Select Drawing Directory Prompt

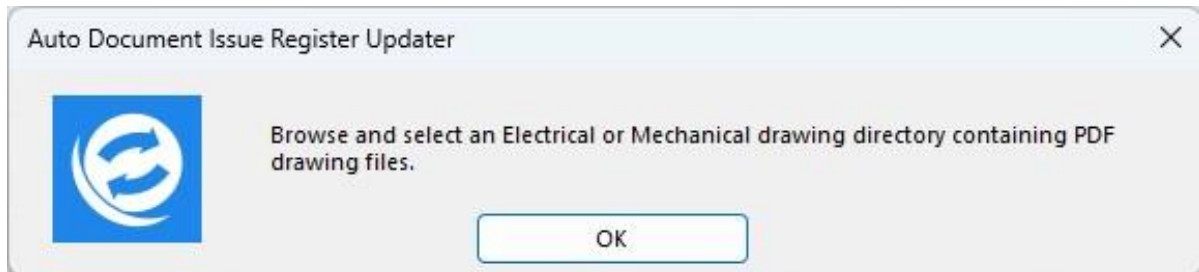

Figure 21

Message: "Browse and select an Electrical or Mechanical drawing directory containing PDF drawing files."

Cause: Prompt to select the directory containing all current issue PDF drawing(s).

Resolution:

1. From the File menu select Browse For Drawing Directory (Ctrl+D) or alternatively click the blue browse button adjacent to the Mechanical or Electrical Drawing Directory containing PDF files row to select drawing directory containing drawing(s).
2. Ensure the directory contains ONLY valid drawing PDFs with revision numbers.
3. Do not include superseded drawings, CVs, or other documents.

22.10 File In Use By Another Program

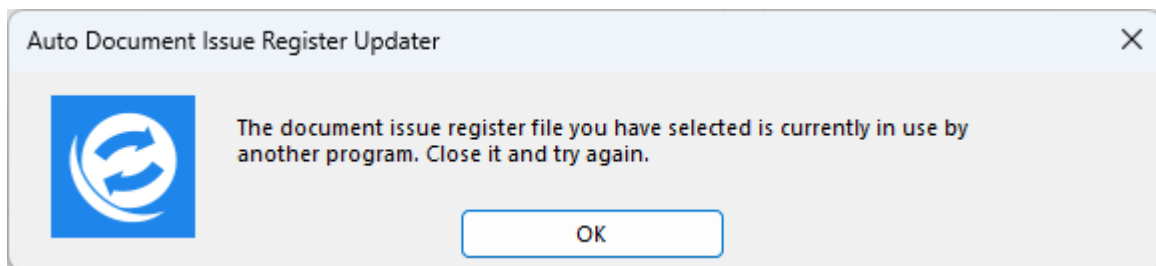

Figure 22

Message: "The document issue register file you have selected is currently in use by another program. Close it and try again."

Cause: The Excel Document Issue Register file is currently open in Microsoft Excel, Teams, or another application.

Resolution:

1. Close Microsoft Excel completely - check for any hidden windows.
2. If the file is on OneDrive/File server, ensure it is not being edited by another user.
3. Wait 10 seconds for file locks to release.
4. Click "Update Register" again.
5. Check Task Manager > Processes for any background Excel.exe processes and end them.
6. If using OneDrive - Close the file in the browser preview as well.
7. Disable "AutoSave" in Excel temporarily if lock persists.

22.11 No PDF Drawing Files Found

Figure 23

Message: "The drawings directory you selected does not contain any PDF drawing files. Select another drawing directory."

Cause: The drawings directory you selected does not contain any PDF drawing(s).

Resolution:

1. From the File menu select Browse For Drawing Directory (Ctrl+D) or alternatively click the blue browse button adjacent to the Mechanical or Electrical Drawing Directory containing PDF files row to locate and select another drawing directory containing drawing(s).

22.12 Drawing Directory Does Not Exist

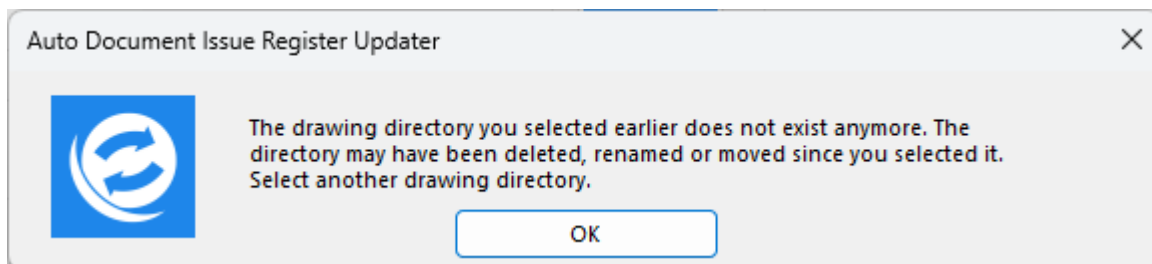

Figure 24

Message: "The drawing directory you selected earlier does not exist anymore. The directory may have been deleted, renamed or moved since you selected it."

Cause: The directory path stored by the application is no longer valid. The drawing directory was moved, renamed, or deleted.

Resolution:

1. From the File menu select Browse For Drawing Directory (Ctrl+D) or alternatively click the blue browse button adjacent to the Mechanical or Electrical Drawing Directory containing PDF files row to locate and select another drawing directory.
2. Avoid moving or renaming the drawing directory while the application is open.

22.13 Microsoft Excel Not Installed

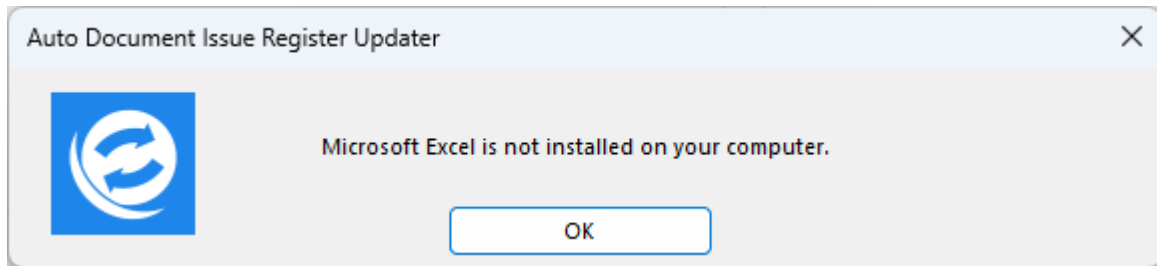

Figure 25

Message: "Microsoft Excel is not installed on your computer."

Cause: The Auto Document Issue Register Updater software has checked your computer and cannot find Excel installed.

Resolution:

1. Install Microsoft Excel desktop app and ensure you have opened it at least once and accepted the license activation.
2. Ensure Excel can be opened normally outside of this application.
3. A restart may be required after installing Excel.

22.14 User Guide Not found

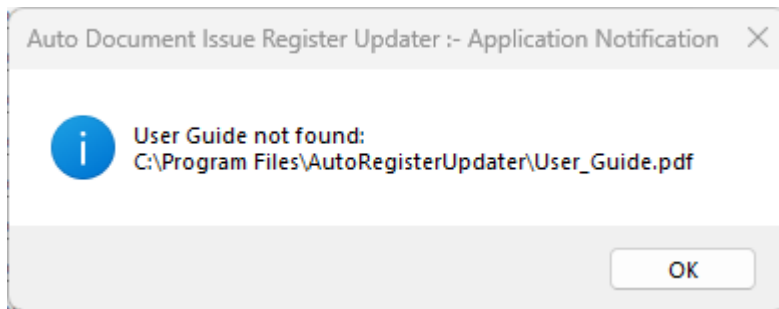

Figure 26

Message: "User Guide not found."

Cause: The User_Guide.pdf file does not exist in the application folder. C:\Program Files\AutoRegisterUpdater\User_Guide.pdf

Resolution:

1. Restore the User_Guide.pdf file to the application folder.
2. Restoring the User_Guide.pdf will prevent the above dialog as shown in figure 25 from being displayed again.

22.13 General Troubleshooting Tips

- Always close the Document Issue Register Excel file in all programs before running an update.
- Maintain consistent file naming: [DrawingNumber]*[Drawing Description]-[Sheet]-[RevX].pdf - Example: E-101 3 BED BUNGALOW ELECTRICAL SERVICES LAYOUT-A3-P2.pdf
- Keep only current issue drawings in your selected directory. Archive superseded revisions elsewhere.
- Do not rename, move, or delete the Excel register while the application is running.
- If an update fails, check the drawing directory for non-compliant files first.
- For persistent issues, note the exact error message and check Help > About for your version number before contacting support.
- Back up your Document Issue Register Excel file before major updates.

23. Appendix A

23.1 Drawing File Naming Requirements

Drawing files must follow the naming convention shown in the examples below:

E-100-J1 ELECTRICAL SERVICES LAYOUT HOUSE TYPE J1-A0-P1.pdf

M-300-1 BLOCK 1 GROUND FLOOR WATER SERVICES LAYOUT-A2-T4.pdf

M-200 BLOCK 1 GROUND FLOOR VENTILATION SERVICES LAYOUT-A2-C2.pdf

ME-1000 SITE SERVICES LAYOUT-A2-C1.pdf

To be accepted by the software, all drawing filenames must strictly adhere to this format, including the required spacing and delimiters.

The filename structure consists of:

[Drawing Number] [Drawing Description]-[Sheet Size]-[Revision].pdf

DRAWING FILE NAME VALIDATION RULES

Where:

- All letters to be capitalised in drawing file name
- No double white space between words
- Valid sheet sizes only A0, A1, A2, A3, A4 inclusive
- Valid revisions only P1-9, T1-9 or C1-9 inclusive
- Drawing file name extension can be .PDF or .pdf or .PdF
- Hyphens in drawing number and before sheet size and before revision
- Punctuation characters will also be restricted
- Any pdf file that does not comply with the above validation rules will fail validation and the user will be notified. Refer to section 22.3 in this guide

Only drawings saved in **PDF format** (.pdf) can be processed by the software.

23.2 Document Issue Register Excel file formats .xls or .xlsx

This software supports both .xls and .xlsx file formats. The .xls format is a legacy Microsoft Excel format that remains fully supported for compatibility purposes. The .xlsx format is the modern Excel standard and is also fully supported.

23.3 Graphics in your Excel Document Issue Register

This software preserves the graphical integrity of logos imported into your Excel register. Logo images retain their original appearance, including their size, position, and visual quality, ensuring consistency between the source Excel workbook and the software display. The same high-quality graphics are maintained in generated PDF reports, with logo fidelity preserved across both A4 and A3 page formats.

23.4 Application UI Dialog Location on Screen Saved on Exit

The application now remembers the dialog's screen position and restores it the next time it is opened.

23.5 Software Limitation – Initial Pass Only

This software is designed to complete only the initial pass of the register. Then subsequent addition of drawings to the register must be carried out manually. The initial population of the register represents the most significant portion of the work, as it involves entering all drawings for the first time. Any additional drawings added later, as well as all subsequent revisions, must also be completed manually.

23.6 Application UI Dialog Behavior During Register Updates

When updating a register, the Auto Document Issue Register Updater focuses all system resources on completing the update accurately. During this time the main window will remain fixed in place on your desktop and cannot be moved. A progress indicator is shown. Once complete, the window will return to normal on your desktop and can be moved freely. Please do not open Excel or close the application while an update is in progress.

23.7 Manual Formatting of the Excel Document Issue Register for PDF Output

The Auto Document Issue Register Updater software provides an automated function for generating the Document Issue Register as a PDF. However, there may be occasions when the software's automatic formatting does not produce the desired PDF output.

This can occur when the register contains a large number of drawings, for example, 60 or more. In such cases, the register may be split across three A4 pages, with the third page containing only the register header and no additional information. This can result in an incomplete or aesthetically unappealing PDF output.

If this occurs, an alternative is to change the paper size from A4 to A3. In many cases, the complete Document Issue Register can then be accommodated on a single A3 sheet.

If neither A4 nor A3 produces a satisfactory result using the software's automatic formatting, it is recommended that the Document Issue Register be opened directly in Excel and the page setup adjusted manually.

Manual formatting in Excel provides greater control over the final layout, including page breaks, print areas, scaling, margins, and page orientation. This allows the register to be arranged in a clear and professional format, as viewed in Excel's Print Preview.

Once the layout has been finalised and the desired appearance confirmed in Print Preview, the PDF register can be generated directly from Excel. This approach provides greater control over the final PDF output and helps ensure that the completed register is presented in a clear, consistent, and aesthetically pleasing format.

23.8 System Stability Requirements for Reliable Software Operation

The Auto Document Issue Register Updater software can only operate reliably when the underlying operating system is itself stable and functioning correctly.

If your operating system is unstable, unreliable, or behaving erratically, you should ask your IT support team or system analysts to investigate and, if necessary, rebuild or reinstall the operating system on your machine.

As the developer of the Auto Document Issue Register Updater software, I cannot guarantee reliable or consistent performance of the software when it is running on an operating system that is unstable or malfunctioning. The stability and reliability of the underlying operating system are essential to the proper operation of the software.
